Course Description

This class will lean heavily on learning how to use the camera app on our iPhones to take better and more consistent quality photos. We will be exploring the many different options for taking pictures and videos and the myriad of sub menus and fun enhancements built right in to our phones. There are just SO many unique options the camera app allows – you just need to know where to look and how to set up and execute. Some of the features you will learn are actually more advanced than the capabilities of digital cameras. Along with learning about lighting, depth of field, and composition – together we will learn editing techniques built in to our camera app as well as third party apps that can give you results that rival expensive computer programs!

Remember they are called IPHONES. We will also be learning many of the time saving and fun features built in to our phones. No download needed. Just fun, useful information to make owning our phones a more positive experience.

Along with classroom instruction, there will be 2 field trips planned during the semester for some real hands on fun!

Please note: An iPhone 14 or newer model will get you the best experience. Older models may not have many of the features being taught in this class.

David Weinstein has been a Las Vegas resident since 1979 and a professional photographer for over 40 years. Along with teaching at OLLI, David has also been a teacher with the Nevada Camera Club and a co-leader of the Photography Explorer program.
